RTS Project 2 Readme

Setup

The modified codes are layout as they should be in the linux kernel ex: linux-2.6.32.60/arch/x86/include/asm/unistd_32.h
Thus a simple cp -r should do the job.

Bonus

For the bonus part, rename shed_sjf_rms.c to shed_sjf.c and replace the original sched_sjf.c in linux-2.6.32.60/kernel.

Testing

Test Programs are executed as follows:
./test_sjf sjf quantum threads jobs
./test_rms rms quantum threads jobs

Note

Due to some technical difficulty, we use two versions of sched_sjf.c to implement the behavior of the two scheduling policy separately.
